

Group 49 // The Higher Street

The lack of energy on Withington high street has triggered the need to 'pour' life into it. We created a street above the current buildings, adding an additional layer to the existing community. We propose a flexible tetris-like complex that will combine residential units, work spaces, independent shops and leisure spots. It's accessed by a pedestrian garden bridge that promotes vibrant energy, a healthy lifestyle and a sense of community. Leaving the existing road below, it continues to connect Withington to nearby towns however the buildings are preserved and utilised as funky bars and trendy food shops

Withington is conveniently connected to larger thriving high streets and centres. This concept needs to draw down some of this energy, business and community down to the struggling high street in Withington.
